Accel loses small businesses to the journey, not to demand

THE PROBLEM Apr–Jun 2026: 5,000 leads, 368 activated (7.4%). ₹35.6 lakh of ₹55.4 lakh spent went on leads never won.

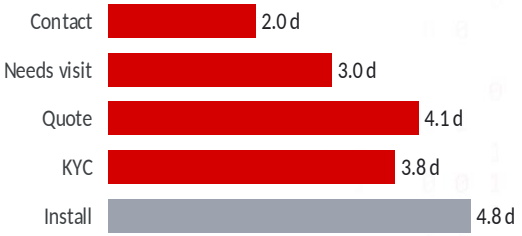

LEAD FUNNEL, APR–JUN 2026

1,583 LEADS LOST TO THE JOURNEY ITSELF

WHERE THE 17.6 DAYS GO

12.8 days are spent waiting for people and paper. We do all of it in one sitting; only the install (4.8 days) stays.

SIGNALS IN THE DATA, AND WHAT WE BUILT FOR EACH

9.6% vs 2.0%

activation with vs without a GSTIN (4.7×)

Built: GSTIN first: one number fills and verifies the profile

5.9% → 27.9%

6-month churn after 1 vs 5 status chases (small samples: 34 and 43)

Built: WhatsApp update at every stage; STATUS by message

6.2% vs 8.0%

conversion of regional-language vs Hindi or English leads

Built: The advisor in all 10 languages the leads speak

₹4.1k vs ₹24.3k

cost per activation: referral vs field sales

Built: WhatsApp entry, partner QR and assisted mode

Platform Partner unstop

Win offices first, shops on self-serve, chains with the field force

Q1 · SEGMENTS AND BUNDLES Ranked on the leads data; each bundle is our advisor's real output (12-month price, before GST).

Segment, in order	Share of leads	Activation	Cost per activation	Payback on revenue	6-month churn	Contract	How they buy	Example bundle from our advisor
Professional offices 1st · the pilot starts here	25%	11.1%	₹10,695	1.6 mo	13.8%	12 months	Self-serve; a call back when asked	**Dental clinic, Pune, 8 staff:** fibre 300, 2 mobile lines, email and security for 5, cloud backup · ₹4,936/mo
Micro retail & services 2nd · self-serve alongside	54%	4.1%	₹20,007	8.1 mo	22.7%	12 months	Self-serve on WhatsApp or the app; no visit	**Pharmacy, Jaipur, 4 staff, UPI fails, a theft:** fibre 100, 2 mobile lines, billing tablet, 2 CCTV, backup internet · ₹3,593/mo
Small multi-site 3rd · at scale, assisted	15%	11.0%	₹15,614	0.6 mo	10.8%	12 months	Advisor quotes; field confirms each site	**Restaurant chain, 5 outlets:** fibre 300 × 5, SD-WAN, failover, POS, CCTV, guest Wi-Fi · ₹33,819/mo
Small manufacturers 4th · field-led	6%	12.8%	₹15,324	1.0 mo	8.1%	24 months	Field-led; advisor prices it on the visit	**Auto-parts plant, 80 staff:** 20 Mbps leased line, firewall, 8 machine IoT, CCTV, email · ₹19,811/mo

Shops only pay back digitally

₹20,007 to win a ₹2,470 bundle is 8 months of revenue. At our ₹5,000 target, self-serve pays back in 2. Basic starts at ₹1,448 (fibre and a SIM).

Field force moves up-market

Chains and plants pay back in a month and bring 73% of revenue. Field visits go there; shops and offices close on their own.

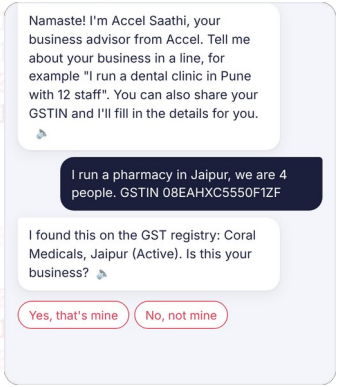

Contract by segment

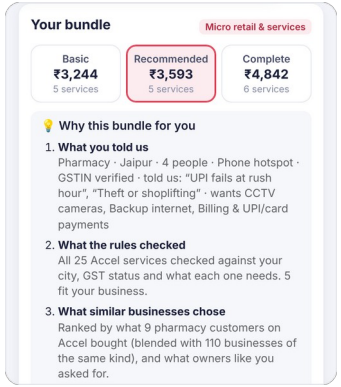

12 months for shops, offices and chains; 24 for plants (same churn, and 62% already choose it). No 6-month deals: 2 of 3 churned. 24 months is offered only as a lower monthly price.

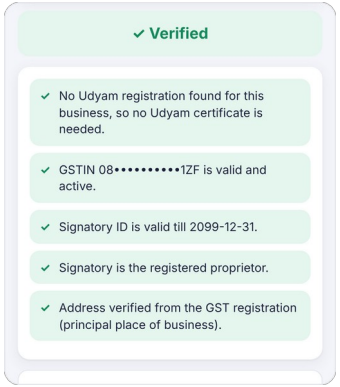

Platform Partner unstop

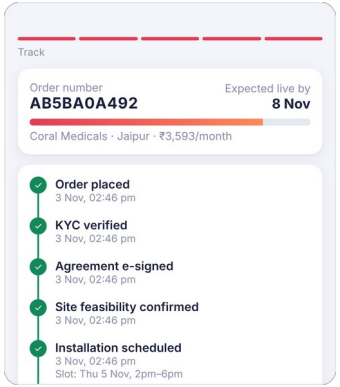

Priya goes from one message to a booked installation in 15 minutes

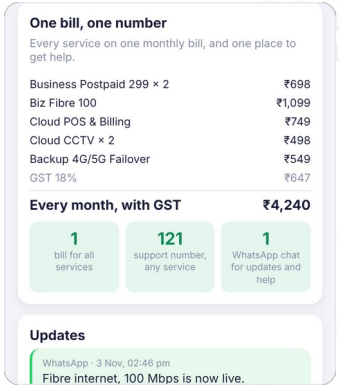

Q2 + Q3 · THE JOURNEY, BUILT Coral Medicals, Jaipur: our hardest, lowest-paying segment. Live-app screens; 15 min is our timed run.

1 One line, profile filled

Her GSTIN fills the profile; it asks "is this you?" first.

2 Built on her problems

"UPI fails" and "theft" add backup and 2 cameras: ₹2,546 → ₹3,593.

3 KYC in 2 minutes

DigiLocker and Aadhaar OTP, checked line by line. No paper.

4 A tracker, not calls

Her install slot, a date per service, WhatsApp at each step.

5 One bill, one number

5 services, ₹4,240 a month with GST, one support number.

TODAY
17.6 days · 3 calls to chase · a 4-day quote · a bill per product

Try it live

Platform Partner unstop

The advisor sells like a good salesperson and never invents a price

Q2 · THE ADVISOR The AI understands her; rules, real customers and the catalogue decide. Try these lines live.

HOW IT DECIDES

1. **Understand**
   Her words, in any of 10 languages, become facts and problems.
2. **Check**
   Rules on all 25 services. Every ₹ is the catalogue's.
3. **Rank**
   Learned from 368 customers; her problems go first.
4. **Level**
   Basic, Recommended, Complete, with a "why" in her words.

IT SELLS, NOT JUST ANSWERS

This is too expensive for me

I understand, every rupee counts. ₹3,593/month is about ₹120 a day for 5 services on one bill. Your choice: trim the extras ₹3,244 · the same bundle on 24 months ₹3,093 · or tell me a budget.
[Trim extras: ₹3,244/mo] [24 months: ₹3,093/mo] [Keep it, go ahead]

My nephew set up Jio for 399, why should I pay you?

Fair question. I can't see that plan, but your ₹3,593 gets 100 Mbps fibre steady enough for UPI and billing, 5 services on one bill, live in about 5 days. Want only the essentials? Basic is ₹3,244.
[Basic: ₹3,244/mo] [Make it cheaper] [✓ Go ahead]

Never changes her bundle without asking; every reply ends with a next step.

PERSONAL, NOT ONE-SIZE

Same pharmacy, no problems
Fibre 100, 2 lines, billing — **₹2,546/mo**

She says "UPI fails" and "theft"
+ backup internet, + 2 cameras — **₹3,593/mo**

Her own problems add what no best-seller list can: backup and 2 cameras. The learned ranking ties segment best-sellers (A5).

PROOF IT WORKS

- **92/92** advisor checks, AI on and off, 28 sales moments
- **100/100** the journey in all 10 languages, AI off
- **12/12** KYC specimens judged right
- **106/106** WhatsApp, privacy, partner, KYC, ranking

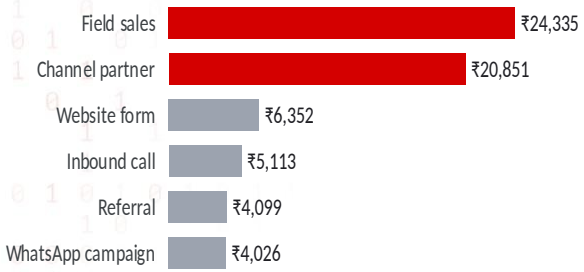

SMART KYC AND PRIVACY BY DESIGN · DPDP ACT 2023

- GSTIN and Udyam registry, DigiLocker, Aadhaar OTP
- OCR re-read with checksums; 20+ checks
- Encrypted before storage (AES-256-GCM)
- Tokens, not data, sent to any AI
- One consent switch per purpose
- Erase my data, any time

The field force and partners sell more, not less

Q4 · FIELD FORCE AND PARTNERS The advisor does the paperwork; partners keep the sale and are paid for customers who stay.

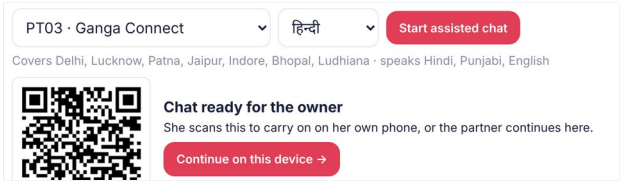

COST PER ACTIVATION BY CHANNEL, APR–JUN

WHO SELLS WHAT

Owner	Channel
Shops, offices	Self-serve: app or WhatsApp
Wants a person	Partner assists, in person
Chat didn't close	Scored call list, next step
Chains, plants	Advisor prices, field checks sites

PARTNER CONSOLE IN THE BUILD

Partner sales and commission

Partner	Sales	Earned	Pending
Shree Telecom Solutions PT01 · Pune, Mumbai, Nashik	1	₹0	₹4,293
Ganga Connect PT03 · Delhi, Lucknow, Patna	2 1 protected	₹2,146	₹6,440

Ganga Connect starts a chat for an owner; the QR hands it to her phone. Its sales, protected sales and commission update live.

Field time goes where it pays

Field sales costs ₹24,335 per activation; a shop takes 8 months to pay that back. Freed visits go to chains and plants (73% of revenue). In the pilot, every self-serve sale in a rep's area counts toward their target.

WHY PARTNERS WILL PUSH IT

Commission protection

The owner confirms her number by a code on her own phone. That number stays the partner's for 30 days, even if she orders alone later. A typed-in number earns nothing.

Pay tied to retention

One month's rental per sale, half when live, half after 6 months: ₹2,470 for a typical shop, ₹6,900 at the median. The advisor does the paperwork, so a partner serves more owners a day.

Counter QR

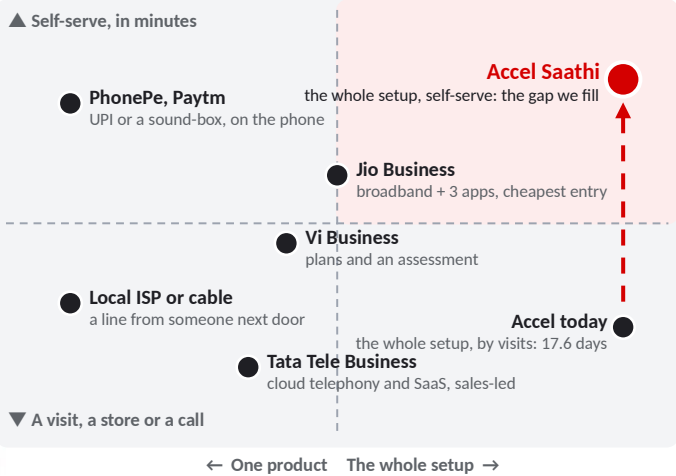

Each partner's QR opens the app tagged to them, so walk-ins they send are credited too.

Platform Partner unstop

Rivals sell plans or single products; we sell the whole setup, self-serve

COMPETITIVE ANALYSIS What a small-business owner can buy today, and how; from official pages and press, checked 3–4 Nov 2026.

WHERE EACH RIVAL SITS FOR AN OWNER

OUR SIDE, HONESTLY

Built and live
Advisor in 10 languages, catalogue prices, KYC checks, tracker, real WhatsApp (test number), partner console

Needs Accel to switch on
Live GST and Udyam registries (we use the case's mock ones), an e-KYC licence (KUA) for Aadhaar, one-bill billing, a verified WhatsApp sender

WHAT THEY DO BETTER, AND OUR ANSWER

Jio Business: price and brand
We win on fit, not price: a right-sized bundle, the 24-month saving shown, cheaper in one tap.

Local ISPs: cheapest, next door
325 lost leads were "locked in", 207 went "cheaper". Local partners sell through us and keep the sale.

Vi and TTBS: advice, cloud tools
Vi assesses, TTBS sells telephony. We go from advice to KYC and order in one flow.

Payment apps: live in minutes
Owners sign up for UPI in minutes, for one product. We match that speed for the whole setup.

Our moat
38% of leads already use Accel and convert at 9.2% vs 6.2% on other providers. Their ID KYC is reused: no new ID documents.

Cheapest way in, public price a month: Jio Max 801, 100 Mbps + 3 apps · Vi ₹349 business SIM · PhonePe ₹125 sound-box · **Saathi Basic ₹1,448, fibre + a SIM**

Placement is our reading of official pages and press, checked 3–4 Nov 2026: jio.com/business, Business Broadband Max with JioMeet, JioGate, JioAttendance (Max 801 at 100 Mbps: TelecomTalk, 13 Mar 2026); myvi.in/business, ReadyForNext assessment, business postpaid from ₹349 (TelecomTalk, 13 Apr 2025); TTBS sells Smartflo cloud telephony, no mobile network since 2019; phonepe.com merchant help, SmartSpeaker ₹125 a month. Accel is the case's fictional operator.

Platform Partner unstop

Twice the customers from the same leads, at half the running cost each

Q5 · IMPACT AND METRICS Modelled on one quarter of Accel's leads; each target is a go/no-go gate for the pilot.

MODELLED: EVERY QUARTER, SAME LEADS

368 → 760
activations a quarter, same spend: +392 ≈ ₹3.2 crore a year

₹15,053 → ₹7,746
per activation: (₹55.4 lakh same spend + ₹3.5 lakh to run) / 760

≈ ₹11,700 all-in
with a 5-person team (₹30 lakh a quarter); falls as leads grow

Assumption: half the journey losses at each step go; those kept still face every later loss. Half, as the visit (827 of 1,583) is gone, not shortened.
Range: a quarter → 538 (₹10,947); three quarters → 1,045 (₹5,638).

HOW WE MEASURE SUCCESS: TARGET = PILOT GATE

Metric	Today	Target	Why it is reachable
Lead to activation	7.4%	**15%**	Half the visit, quote and paperwork losses removed at each step
Lead to live	17.6 days	**≤ 7 days**	12.8 days of contact, needs, quote and KYC become one sitting
Status chases per customer	3.0	**< 0.5**	WhatsApp update at every stage; STATUS by message
Cost per activation	₹15,053	**< ₹8,000**	2× activations, running cost incl.; the team cost per customer falls as leads grow
6-month churn	15.2%	**≤ today, by segment**	Won-back leads are 57% shops (22.7% today); the pilot tracks chases per customer as the early sign

ROLLOUT, WITH A GATE AT EACH STEP

Pilot · 8 weeks
Jaipur and Pune: offices first, shops self-serve alongside; 3 languages; A/B vs the field journey. About ₹30 lakh.
Go if 1.5× the field arm's conversion, ≤ 7 days, < 1 chase

Scale · 2 quarters
All 10 languages, tier 1–2 cities, every partner on assisted mode; chains with field site checks.
Go if cost per activation < ₹8,000

Grow · year 1
Bundles for Accel's mobile-only business base, GST and Udyam registration help, IoT for plants.
Churn ≤ today in every segment

TOP RISKS AND OUR CONTROL

AI says something wrong: rules set every price; a person on every screen
Partners resist: commission protection, the scored call list
e-KYC licence: Aadhaar OTP needs Accel as a KUA; else DigiLocker
2× installs: slots capped at crew capacity; install days are a gate
Business SIMs: each SIM user's own Aadhaar OTP, as DoT requires

Our cost estimates: running Saathi ₹3.5 lakh a quarter = cloud and model ₹3.0 + e-KYC ₹0.2 + WhatsApp and AI ₹0.3; a 5-person team ₹30 lakh a quarter. Pilot ₹30 lakh for 8 weeks.

Team TouristGuide_NIT_Jamshedpur · Sujal Bhatu, Prince Mehta · Airtel Sync 2026

Platform Partner unstop

A1 · Architecture: the AI understands, rules decide, privacy is built in

One FastAPI service behind HTTPS serves the app, the WhatsApp webhook and the partner console. Live at udyam.openforge.online. Code and tests: github.com/sujalbhatu/accel-saathi.

Prototype: React + Vite PWA · FastAPI · SQLite, every record encrypted · RapidOCR (ONNX, CPU) · scikit-learn · WhatsApp Cloud API · Groq and Gemini. Runs on a 1 GB VM; the AI is optional.

Production path: the same service in Accel's private cloud, a managed encrypted database, an open model hosted there, and Accel's own e-KYC licence (KUA) for Aadhaar.

Platform Partner unstop

A2 · Privacy note: collect what each step needs, for as long as it needs it

Designed to the DPDP Act 2023. The full notice is in the app at /privacy.html and shown before any document is read.

Purpose	Data	Kept for	Basis
Advice	Chat messages, business type, city, team size, sites	The session; erased on request before an order	Consent (owner starts the chat)
KYC	GST, Udyam, signatory and address fields; a hash of each photo, never the image	While the connection is active, then as licence rules require	Consent switch (required for KYC)
Order and installation	Contact name, masked mobile, install address, chosen bundle	Contract term	Contract
Order updates	WhatsApp number, stored apart from the order, masked everywhere	Until go-live and support end	Consent switch (on by default, can be off)
Marketing	Nothing unless switched on	Until withdrawn	Consent switch (off by default)

Owner's rights

Consent in her language with one switch per purpose; withdraw as easily as given; erase my data in one tap before an order, or "DELETE MY DATA" on WhatsApp; a named grievance officer.

Assisted sales

When a partner holds the device, consent comes only from a code sent to the owner's own phone, so a partner can never consent for her.

Security

Encrypted before storage: every record sealed with AES-256-GCM, phone-number keys replaced by tokens. HTTPS everywhere; webhooks verified by Meta's signature; IDs masked in screens and logs.

AI and breaches

Personal data becomes tokens before any AI call; images never leave. Production model runs in Accel's private cloud. Breaches reported as the DPDP Rules require.

A3 · Every signal we found in the data, and the decision it drove

smb_leads.csv, 5,000 leads, Apr–Jun 2026. Nothing in the app is hard-coded to this copy of the data.

Signal in the data	Decision in the product and plan
GSTIN holders activate at 9.6% vs 2.0% without (4.7×)	Ask for the GSTIN first; registry fills and verifies the profile
Churn 5.9% after 1 status chase vs 27.9% after 5 (2 of 34 vs 12 of 43), not steady between; NPS 7.5 to 6.0	WhatsApp update at every stage, STATUS / RESCHEDULE / PROBLEM by message
Regional-language leads convert at 6.2% vs 8.0% for Hindi or English	Advisor, buttons and WhatsApp in 10 languages, voice in, read-aloud out
Referral ₹4,099 and WhatsApp ₹4,026 per activation vs field ₹24,335	WhatsApp entry, partner counter QR, assisted mode
Accel users (38% of leads) convert at 9.2% vs 6.2% on other providers	Reuse Accel KYC; lead with the bundle for this base
Only chains and plants took 24 months; in chains they churned more (15.8% vs 6.7%); 2 of 3 six-month deals churned	12 months for shops, offices and chains, 24 for plants; 24 shown only as a lower price; no 6-month deals
Micro shops: ₹20,007 to acquire, ₹2,470 bundle, 22.7% churn	Shops are self-serve only; field time goes to chains and plants
1,583 drop-offs from visits, slow or complex quotes, paperwork, installs over 21 days	One sitting: instant quote in plain words, KYC in minutes, ETA per service
325 "locked in", 207 "went cheaper"	Win on fit and one bill, not price; local partners sell through us

Impact model (slide 8): at each funnel step, half of the journey losses are removed and every other loss stays at today's rate, so 368 → 760 (a quarter removed: 538; three quarters: 1,045). Cost per activation = (₹55.4 lakh, same spend, + ₹3.5 lakh a quarter to run Saathi) / 760 = ₹7,746; with a 5-person team (₹30 lakh a quarter), ≈ ₹11,700. Revenue = 392 × ₹6,900 median bundle × 12 ≈ ₹3.2 crore a year (the median, not the ₹12,350 mean).

Platform Partner unstop

A4 · Test results: what we checked, and the KYC answer key

All suites are in backend/tests and run on GitHub on every push; the advisor suite also runs with the live AI (--llm).

Suite	Pass	What it covers
Advisor scenarios	92/92	35 owners, 5 languages, 7 chat changes, 22 questions, 28 sales moments; 498+ catalogue checks; AI on and off
Search test	93.5%	83 questions, 10 languages: right section in the 4 the AI gets (keywords alone 65%)
AI answers	0%	invented numbers (live AI, 83 questions); 96% owner's language, 94% right source; ≈ ₹0.11 a chat
Ranking back-test	3/3	Leave-one-out, 368 customers: beats hand rules and one bundle for all; ties segment best-sellers (A5)
10 languages	100/100	The whole journey in each language, AI off: every string, prices, script, the selling taps
Specimen KYC pack	12/12	Every applicant judged as the planted problem requires (right table)
WhatsApp orders	59/59	Signed webhooks, every stage update, STATUS, RESCHEDULE, PROBLEM; one reminder only
Privacy and ranking	17/17	No readable data in the DB file, tampering refused, AI sees only tokens, ranking learned per business type
Partner flows	17/17	Owner code, lockout after 5 tries, protection across sessions, referral QR, console totals
KYC flows	10/10	No-GSTIN owners, remove and replace, Udyam only when registered

Applicant	Decision	Reason found
K01	Rejected	GSTIN cancelled in the registry
K02	Approved	Clean
K03	Approved	Clean
K04	Rejected	GST certificate too blurred to read
K05	Rejected	Udyam certificate missing
K06	Rejected	Altered GSTIN: checksum fails; registry shows the real one
K07	Rejected	Legal name differs from the registry
K08	Approved	Clean
K09	Approved	Clean
K10	Review	LLP: authorisation letter needed (template given)
K11	Rejected	Bill 257 days old (limit 90)
K12	Approved	Clean

Platform Partner unstop

A5 · How the advisor ranks a bundle, and how we tested it

Beyond fixed weights: metadata on both sides of the catalogue, learned from customers, re-ranked by what she tells us.

1 Catalogue metadata
Each of the 25 services is tagged with the need it meets, who may buy it (city tier, size, GSTIN), what it depends on and how many to add per person, site or counter.

2 Owner problems
8 everyday problems (UPI fails at rush hour, theft, missed calls, records on one PC, internet drops, guests want Wi-Fi, repeat customers, branches out of sight) mapped to services. Asked as taps; read from free text in 10 languages by rules and the AI.

3 Learned from customers
Share of similar activated customers who kept each service: her business type, pulled toward its segment with a 30-customer prior; churned customers count half. What owners asked for nudges the order (a quarter weight).

4 Levels and reasons
Basic: essentials plus her problems. Recommended: the learned pre-ticks. Complete: plus what businesses like hers usually add. "Why this bundle" shows the four steps in her words.

BACK-TEST: 368 ACTIVATED CUSTOMERS, LEAVE-ONE-OUT

Method	Precision	Recall	F1
One bundle for everyone	37.2%	43.1%	0.399
Hand-written rules (our first version)	60.0%	65.2%	0.625
Best-sellers in her segment	63.1%	66.9%	0.650
Accel Saathi, learned	**63.2%**	**67.1%**	**0.651**

How: each customer is taken out of the counts, then predicted from what we would know at the first chat (type, size, sites, city, GST, internet today). Every method builds a valid bundle of the same size.

What it shows: learning beats hand-written rules and a one-size bundle. Accel's purchases differ mostly by segment, so it matches segment best-sellers; business type, retention and her own problems add what no average can know.

What we did not use: products of interest at lead time matched purchases only 29% of the time, so they never decide a pre-tick.

Platform Partner unstop
